- Step 1: Create a Phantom Wallet

  - Search for "Phantom Wallet" in the App Store. Look for the purple logo with a white ghost.

  - Download and install the Phantom Wallet app on your device.

  - Follow the instructions to create a new wallet. Be sure to write down your security keys and keep them in a safe place. Do not take a screenshot of them or store them on your phone.

  - Remember, never share your security keys with anyone. If someone else obtains them, your wallet can be compromised.

- Step 2: Purchase Solana (SOL)

  - Open the Phantom Wallet app and press the dollar sign button located in the bottom left corner.

  - Select the "Buy" option and choose "Solana (SOL)" as the cryptocurrency you wish to purchase.

  - You can purchase Solana using either Moon Pay or Coinbase Pay within your Phantom Wallet. Follow the prompts to complete the transaction.

- Step 3: Access Decentralized Finance (DeFi) Options

  - In the Phantom Wallet app, select the globe icon at the bottom right corner to access DeFi options.

  - Choose a DeFi platform. Jupiter is recommended for its user-friendly interface and wide range of features.

- Step 4: Swap for 'Hunter Biden's Laptop'

  - Once inside the Jupiter interface, click on "Connect wallet" in the top right corner of the app.

  - In the "You're paying" section, select SOL as the currency you wish to swap.

  - In the "To receive" section, change the "Token List" setting from "strict" to "all."

    - Enter the contract address (CA) for 'Hunter Biden's Laptop':

HLwEJQVzs7SvjXuXpBTRHaLp5S6uWoWTUhLjJxBfy1c7. Make sure the first 5 and last 5 digits match.

  - Select 'Hunter Biden's Laptop' from the list and confirm the swap.

  - Wait for the transaction to complete. You should see a confirmation that your transfer has been successful.

- Note: If you encounter a swap error, it's best to exit out of the Jupiter interface and restart the process from Step 3. This can often resolve any issues with the transaction.
